

Nitara

The models are made in small limited series and their precise rendering, functionality and the usage of quality metal materials make them an interesting technical unique sought out by collectors.

Scale: 1:10
Height: 146 mm
Length: 114 mm
Width: 48 mm
Capacity: 17,5ml

MOBILE DISTILLERY

A MECHANICAL MODEL

"Nobody shall distill alcohol without a tax outside the building and off the land on which they live or work."

The quoted paragraph from the Spirits Act dated in 1888, enforceable for Moravia and some other lands of the Austro-Hungarian monarchy, probably caused that some pot stills "got wheels". While the ferment had to stay on the farm and the distilling had to be done on the spot, lending apparatuses was tolerated by Austro-Hungarian inspectors.

The inspiration for our model was a small mobile device which, as the contemporaries would say, travelled among neighbours in the settlement around the Buchlov castle. It had a copper pot for almost 20 litres of ferment, it was heated by wood. Into a condenser with a copper coil they would pour cold water which had to be refilled during the distillation process. In the meantime spirituous vapours went through side tubes of the condenser head to the coil where they condensed and dripped into a prepared vessel in the form of distillate. The first distillation was a crude one and in the process spirits of 30 % concentration called "low wines" appeared. It was necessary to distill this output once again to increase the concentration and separate the unwanted "heads" from the required "core" and from the "tails" of low quality. The precious "core" was then diluted to 50 or 51 %, the best concentration for the taste and aroma to develop, as proven in years. For this, soft water from a carefully selected spring was used to prevent milkiness.

The models are made in small limited series and their precise rendering, functionality and the use of quality metal materials make them a nice present appreciated by collectors.

To make the model, we used a quality aluminium material with black eloxal coating which resists corrosion and high temperatures in an excellent way. At the model manufacturing we employ the same technologies that are used at the production of parts for demanding industrial equipment, electronics and aviation.

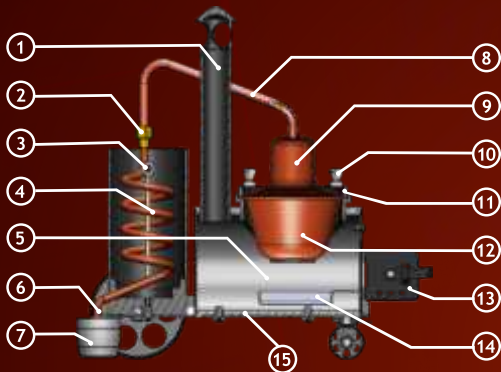

The distilling pot, the lid, side tube and coil of the condenser are 99% pure copper. Copper is worked easily and has favourable catalytic effects on the breakdown of organic esters and hydrocyanic acid. The pot and the lid have a hand lapped surface of contact. The blade of the firebox, spindles, pegs and screws are made of premium stainless steel, the measure is made of chemically resistant stainless steel fit for food industry purposes. Each model is marked with a unique serial number, which is engraved into the body of the basin.

MOBILE DISTILLERY

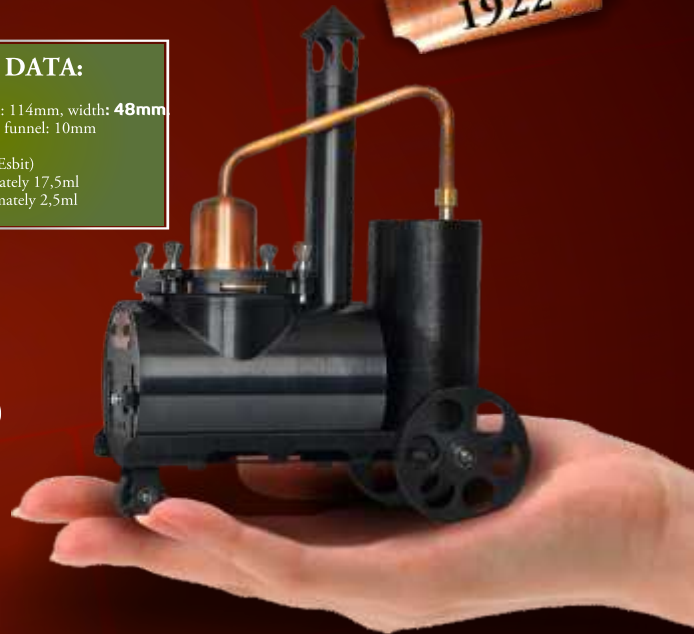

VZOR
1922

TECHNICAL DATA:
Scale: 1:10
Height: 146mm, length: 114mm, width: **48mm**
Internal diameter of the funnel: 10mm
Weight: 183g
Fuel: solid fuel tablets (Esbít)
Pot Capacity: approximately 17,5ml
Cup Capacity: approximately 2,5ml

1. funnel, 2. screwing of the condenser, 3. overflow of the condenser, 4. condenser, 5. basin, 6. output faucet, 7. cup, 8. condenser head pipe, 9. lid, 10. butterfly screws, 11. lock collar, 12. pot, 13 firebox door, 14. shovel, 15. chassis

A GIFT WITH IMPACT!

Are you looking for an original and timeless gift for a husband, friend, father, grandfather, colleague.....simply for a man?

Something extraordinary and everlasting? A gift you are going to return to with love and respect many years later? Or are you looking for a thing from Moravia? Something truly Moravian, a thing which is not going to be eaten or drunk up or mislaid? A thing which is not going to fade away? A present for relatives, a business partner or for your own joy?

This is the gift with impact!

It embodies technical skill, tradition, beauty, noble materials, mystery and fight with the elements of nature such as fire, water, air and plum brandy called...

“SLIVOVICE”.

MECHANICAL MODEL

MOBILE DISTILLERY

MOBILE DISTILLERY MODEL, VZOR 1922 "PRESENT" EDITION

In a wooden box with cushioning, including a manual and so called "invasion case" which contains a measure of premium steel, a draw bar, a pump-over hose, a shovel, firebox. The model is marked with a unique serial number.

- STAND
- BUCKET 2 PIECES

Gift sets of the pot still model
and the accessories
